PROFESSIONAL SUMMARY

Final-year B.Tech AI & Data Science student building and deploying agentic AI workflows, stateful RAG systems, and AI security gateways. Hands-on experience orchestrating multi-step LLM reasoning graphs and backend microservices using LangGraph, FastAPI, and ChromaDB, with containerized cloud deployment on AWS ECS Fargate and Docker.

TECHNICAL SKILLS

Languages & Core Backend: Python, SQL, FastAPI, PostgreSQL, SQLAlchemy, REST APIs, Server-Sent Events (SSE)

AI / GenAI & Agentic Systems: LangGraph, LangChain, RAG Systems, AI Agents, AI Agent Security, ChromaDB, OpenAI API, Groq API, PyTorch, HuggingFace, NLP

Cloud, DevOps & Tools: AWS (ECS Fargate, CloudWatch), Docker, Policy-as-Code (YAML), pytest, Git/GitHub, Streamlit

KEY PROJECTS

GuardWAF — AI Agent Security Gateway [[Live Demo](#) | [GitHub](#)] 2026

FastAPI • AWS ECS Fargate • Docker • PostgreSQL • Groq / OpenAI API

- **Architected** an AI Agent Security Gateway (WAF reverse proxy) intercepting, governing, and auditing LLM tool/API calls before execution to prevent unauthorized, malicious, or runaway agent actions.
- **Engineered** sliding-window rate limiting to block runaway agent loops, stateful sequence validation for multi-step execution workflows, and session-aware data-scope verification.
- **Implemented** parameter validation, SQL injection detection, and configurable Policy-as-Code (YAML) security rules paired with a Human-in-the-Loop (HITL) approval workflow featuring automated risk scoring.
- **Containerized** microservices using Docker and deployed to **AWS ECS Fargate** with PostgreSQL audit trail persistence, CloudWatch monitoring, and an SSE live dashboard.

NeuralRAG — Agentic Retrieval-Augmented Generation System [[Live App](#) | [GitHub](#)] 2025 – 2026

LangGraph • ChromaDB • OpenAI / Groq API • Streamlit • Python

- **Architected** a stateful agentic RAG system using **LangGraph** for multi-step reasoning, intent-based query routing, and ChromaDB vector retrieval to ground LLM responses in verifiable source documents.
- **Implemented** a domain-filtered web search tool with JSON state persistence and source-transparency provenance labels, enabling full auditability for every generated answer.
- **Refactored** the Streamlit frontend into a modular, workspace-extensible architecture to support customizable retrieval environments and low-latency interaction.

Intelligent Search Engine [[Render Live](#) | [GitHub](#)] 2025

Python • FastAPI • Vector Embeddings • Render

- **Developed** a semantic search engine leveraging vector embeddings and similarity ranking to surface contextually relevant results beyond exact keyword matching.
- **Engineered** a FastAPI REST API and deployed the service to Render, utilizing vector index search and optimized endpoints for rapid query responses.

ACHIEVEMENTS

- **Secured 15th Place Nationally** at VIT Hackathon (AI/ML Track) out of 100+ competing teams by engineering an AI Medical Diagnostic Chatbot achieving 86% accuracy within 24 hours.

EDUCATION

B.Tech in Artificial Intelligence & Data Science — Sri Shakthi Institute of Engineering and Technology Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning, Database Management Systems (DBMS), NLP, Software Engineering

CERTIFICATIONS

- **Career Essentials in Generative AI** — Microsoft & LinkedIn (Aug 2024) • **Prompt Engineering** — Simplilearn SkillUp (Feb 2026)
- **Introduction to Data Science & NLP** — Infosys Springboard (Jun 2025)
